Vigilo

ACCESSORIES

Know where every machine and every tool is

Attach a Bluetooth beacon to your equipment and let your fleet do the rest: every time a Vigilo tracker passes nearby, the platform updates where it is. No cables, no charging, for years.

No cables or charging · **Up to 8 years of battery*** · **IP67** · **ATEX version**

80 m
Bluetooth range*

8 years
of battery with the standard setting*

IP67
dust and water

ATEX
areas with explosion risk

HOW IT WORKS

Your fleet does the searching

The beacon emits its signal

Each beacon, fixed to the machine, tool or material, emits a unique Bluetooth ID every few seconds.

A Vigilo tracker passes nearby

When a vehicle with a Vigilo tracker is within range, it detects the beacon and links it to its own GPS position.

The platform saves the position

The platform shows the last recorded position of each beacon, with the date, time and the vehicle that detected it.

ALWAYS UP TO DATE

The position updates itself every time a vehicle passes

- Last position on the map Each beacon appears with the name of the equipment it is linked to.
- Date and time of the last detection Know when each piece of equipment was last seen.
- Vehicle that detected it Identify which vehicle took it or passed where it was.
- Position history Check where each piece of equipment has been over the last few days.
- 08:05 Main warehouse Detected by Unit 03
- 10:40 North site, Guayaquil Detected by Unit 12
- 17:12 North site, Guayaquil Detected by Unit 21

WHAT YOU CAN LOCATE

Everything valuable that moves between sites, warehouses and vehicles

Machinery

Mini excavators, compactors, platforms and machinery without their own power.

Tools

Hammers, grinders, measuring equipment and toolboxes.

Generators and compressors

Equipment that moves from site to site and gets lost.

Pallets, containers and cages

Returnable materials and packaging in warehouses and at customers.

Want to always know where your equipment is?

We will prepare a proposal based on the number of items and vehicles.
